Soil improving agent contains hydrogen peroxide and calcium peroxide and
pref. >=1 cpd. selected from cpds. of boron, molybdenum, copper, zinc and
chlorine, and urea. The concns. of hydrogen peroxides and calcium
peroxide are 0.01-0.2g/litre and the amt. of liquid to be sprayed is pref.
>50 litres per are. Boron, molybdenum, copper, zinc and chloride are added
in the form of salts in amts. of <0.01 ppm. The amt. of urea added is
generally about 0.1 ppm.

Respiration disorders of plant roots are avoided, the activity of
roots can be increased and the growth of roots can be accelerated.
